

1. Which command is used to download an image from Docker Hub?
2. Which command is used to remove all stopped containers at once?
3. How does DynamoDB ensure high availability across regions?
4. What is the principle of least privilege in AWS?
5. How do you list all Docker images stored locally?
6. Which S3 feature allows automatic transition of objects between storage classes?
7. How can you enforce MFA (multi-factor authentication) for IAM users?

8. How does Auto Scaling maintain high availability?

9. What is the difference between object versioning and replication in S3?

10. What is the role of the Docker Engine?

11. What is a partition key in DynamoDB?

12. Which file is typically used to define instructions for building a Docker image?

13. Which AWS service can be directly integrated with S3 for event notifications (e.g., file upload)?

14. How can IAM policies be attached to resources?

15. What is the difference between IAM roles and IAM users?

16. What is Docker and how does it differ from a virtual machine?

17. How does S3 ensure data durability?

18. What is the difference between horizontal and vertical scaling?

19. What is the difference between a bind mount and a volume in Docker?

20. Can an S3 bucket name be the same across different AWS accounts? Why or why not?

21. What does automated backup in RDS include?

22. Which command is used to check the installed Docker version?

23. What is the difference between RDS Multi-AZ and RDS Read Replica?

24. What does the ``docker exec`` command do?

25. How does Amazon RDS handle failover in Multi-AZ deployment?

26. What is the maximum size limit of a single RDS instance?

27. Which command stops all running containers at once?

28. What is the difference between the ``docker run`` and ``docker start`` commands?

29. What is the difference between S3 Standard and S3 Glacier storage classes?
30. What is the difference between an inline policy and a managed policy?
31. What is DynamoDB auto-scaling used for?
32. What is the difference between a Docker image and a Docker container?
33. How do DynamoDB streams help in event-driven architecture?
34. What is the purpose of the Docker Hub?
35. What is Route 53 health check used for?
36. How can you view the logs of a running Docker container?

37. Which storage types are supported by Amazon RDS?

38. What is the difference between eventually consistent and strongly consistent reads in DynamoDB?

39. What does S3 stand for in AWS?

40. What is the difference between Multi-AZ deployment and Read Replica in AWS?

41. By default, which port does the Docker daemon run on?

42. How does Elastic Load Balancing contribute to fault tolerance?

43. What security mechanisms can be used to restrict access to an S3 bucket?

44. What is the maximum file size (object size) supported by S3?

45. What does the command `docker ps` display?

46. How are objects uniquely identified in an S3 bucket?
